Test report of

IES LM-79-08

Approved Method: Electrical and Photometric Measurements of Solid-State Lighting Products

Rendered to:

NVCETI Lighting Co.,Ltd

Block 2-2, No. 1, Zhongzhu Road South, Technical Innovation Coast, High-Tech Zone, Zhuhai City, Guangdong Prov., China.

For products:

Direct Linear Ambient Luminaires

Models No.:

54583XXX

(Where the first X denotes installation type and could be 1, 2, 3. 1 which refers pendant mounting, 2 which refers surface mounting and 3 which refers pendant mounting with emergency power supply, the last XX denotes CCT and 61-70 which refers 5000K)

Test Date: Apr. 26, 2017 to May. 11, 2017

Test Item: Total luminous flux, Luminous Efficacy, Electrical values, Luminous Intensity

Distribution, Chromaticity coordinates, CCT and CRI, Spectral Power Distribution.

Test Lab.: **LCTECH (Zhongshan) Testing Service Co., Ltd**

2/F., Technology and Enterprise Development Center, Guangyuan Road, Xiaolan, Zhongshan, Guangdong, China

1. General

1.1 Product Information

Brand Name	ETI
Product Type	Direct Linear Ambient Luminaires
Model Number	54583XXX
Rated Inputs	120-277VAC, 50/60Hz
Rated Power	33W
Rated Light output	4900lm
Declared CCT	5000K
Power Supply	LED driver
LED Package, Array or Module	2835S Series, EVERLIGHT ELECTRONICS CO., LTD
Dimming Information	Non-dimmable
Receipt Samples	1 unit
Sample Code of lab.	170422136
Date of Receipt Samples	Apr. 22, 2017
Note	-

LCTECH

2. Test conducted and method

The luminaire was operated at least 2 hours to reach stabilization and temperature equilibrium before test.

2.1 Ambient Condition

The ambient temperature in which measurements are being taken was maintained at $25^{\circ}\text{C} \pm 1^{\circ}\text{C}$; the air flow around the sample(s) being tested did not affect the performance.

2.2 Power Supply Characteristics

The AC power supply had a sinusoidal voltage wave shape at the prescribed frequency (60 Hz) such that the RMS summation of the harmonic components does not exceed 3 percent of the fundamental during operation of the test item.

The voltage of AC power supply (RMS voltage) applied to the device under test was regulated to within ± 0.2 percent under load.

2.3 Seasoning and Stabilization

No seasoning was performed in accordance with IESNA LM-79-08. And before the measurement, the sample was stabilized until the light output and power variations were less than 0.5% in 30 minutes intervals (3 readings, 15 minutes apart).

2.4 Electrical Instrumentation

The calibration uncertainties of the instruments for AC voltage and current were less than 0.2 percent, and the calibration uncertainty of the AC power meter was less than 0.5 percent (95 % confidence interval, $k=2$).

2.5 Color Measurement Method

Spectral radiant flux was measured by a sphere (2 meter)-spectroradiometer system, and the color characteristics (Color rendering index, correlated color temperature, chromaticity coordinate) were calculated from these by software automatically.

2.6 Total Luminous Flux Measurement Method

Total luminous flux was measured by both sphere-spectroradiometer system and type C goniophotometer system.

Light intensity distribution was measured by a type C goniophotometer (with mirror) which can keep the sample in burn position when the tests conduct, and the total luminous flux was calculated from the intensity data by software automatically.

Spectral radiant flux was measured by a sphere (2 meter)-spectroradiometer system, and the total luminous flux was calculated from these by software automatically.

2.7 Luminous Intensity Distribution Measurement Method

Luminous intensity distribution was measured by a mirror-type goniophotometer (Type C) which can keep the sample in burn position when the tests conduct, and the kinds of graph were generated by software automatically.

2.8 Spatial Non-uniformity of Chromaticity

The customer did not require this measurement.
